

Number Knowledge Test

ADMINISTRATION CONSIDERATIONS

REMOTE LEARNING ENVIRONMENT

Administration of the Number Knowledge Test Remotely

- The Number Knowledge Test is designed to be administered face-to-face. However, given the need for instruction and assessment in a remote environment, we have gathered guidance for administration of the NKT remotely. Please use remote administration when there is no option of face-to-face and part of a comprehensive assessment plan to gather valuable information to inform instruction. The remote administration is not to be used by anyone who has not had training on the administration of the Number Knowledge Test. The Purpose: determine which number concepts the student has mastered, which they are struggling with and which they still need to learn to inform instruction. You can assess a student's progress over an instructional period.

Remote Guidelines:

- Age norms associated with the scores **may not** be reliable and/or valid when the test is administered remotely.
- Teachers need to be able to see the students as they administer the test. The students should have their video on during the administration.
- Teachers should pay close attention to the students' movements and take good notes as they administer the NKT including problem solving strategies.
- You and your student will need a computer with a camera and microphone. Ensure students can access and use the following technology: Video feature in virtual platform, microphone and speaker controls in a virtual platform and screen enlargement if needed. Use closed captions within google slides if needed to provide accommodations. If you use closed captions, tell students you will be reading the directions aloud to them.

LINKS FOR ADMINISTRATION
